

Assignment:-2

Task 1:- Draw a labeled diagram of an ATX motherboard and mark at least 8 different slots and ports (such as RAM slots, PCIe slots, SATA ports, USB headers, CPU socket, power connector, etc.).

ATX MOTHERBOARD

Task 2:- Research and list 3 popular CPU socket types (for example: LGA1151, AM4, LGA1200) and name one compatible CPU model for each

CPU Socket Type	Compatible CPU Model
• LGA1151	Intel Core i7-9700k
• AM4	AMD Ryzen 5 5600k
• LGA1200	Intel Core i5-10400

Task 3:- Explain in your own words the primary functions of the CPU and the chipset on a motherboard, and describe how they work together when you open a music app like Spotify.

CPU (Central Processing Unit)

- The CPU is the brain of the computer
- It executes instructions from software and performs calculations
- It controls the overall operation of programs and the operating system.

Chipset

- It connects the CPU with the RAM, storage devices (SSD/HDD), graphics card (GPU), and USB devices
- The chipset manages communication between the CPU and other hardware components.
- It ensures that data is transferred efficiently between all connected components.

HOW THEY WORK :

- Click the Spotify icon.
- The CPU receives the command.
- The chipset loads Spotify files from the SSD to the RAM.
- The CPU runs the Spotify app.
- The chipset helps the CPU communicate with the RAM and SSD.
- Spotify opens, and you can play music smoothly.

Task 4:- Find a clear photo of a real motherboard (from the internet or your own device), and identify at least 5 different ports or slots by circling them and labeling each one.
