

Assignment:-5

Task 1:- List all the main components you find inside a desktop PC after opening the cabinet, and write a short description (1-2 lines) for each.

Main Components Inside a Desktop PC

1. **Motherboard** – The main board that connects all the computer parts together.
2. **CPU (Processor)** – The brain of the computer. It processes data and runs programs.
3. **RAM (Memory)** – It stores data that the computer is using. It helps the computer run faster.
4. **GPU (Graphics Card)** – It shows images and videos on the screen. It is important for gaming and video editing.
5. **Storage (SSD/HDD)** – It stores the operating system, software, and files.
6. **Power Supply (PSU)** – It gives power to all the computer parts.
7. **CPU Cooler** – It keeps the processor cool and prevents it from overheating.
8. **Case Fans** – They move air inside the cabinet to keep the computer cool.
9. **Optical Drive (Optional)** – It reads and writes CDs or DVDs if installed.
10. **Cables and Connectors** – They connect the parts and supply power and data.

Task 2:- Take clear photos or draw labeled diagrams of each step as you disassemble a desktop PC, and organize them in a document with captions explaining what you did at each step. Hint: Include steps like unplugging power, removing side panel, disconnecting cables, and removing RAM, HDD/SSD, and motherboard.

Desktop PC Disassembly Steps

Step 1: Unplug the Power

Caption: I turned off the computer and unplugged the power cable.

Step 2: Remove the Side Panel

Caption: I removed the side panel of the PC case to see the parts inside.

Step 3: Disconnect the Cables

Caption: I carefully disconnected the power and data cables from the parts.

Step 4: Remove the RAM

Caption: I pressed the clips on both sides and removed the RAM carefully.

Step 5: Remove the HDD/SSD

Caption: I disconnected the cables and took out the HDD/SSD from the case.

Step 6: Remove the Graphics Card (GPU)

Caption: I removed the screw, unlocked the slot, and carefully took out the graphics card.

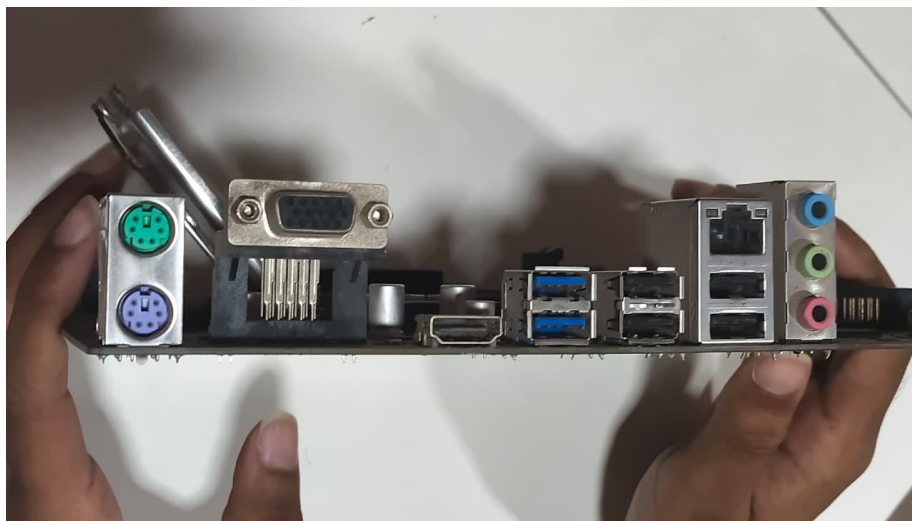

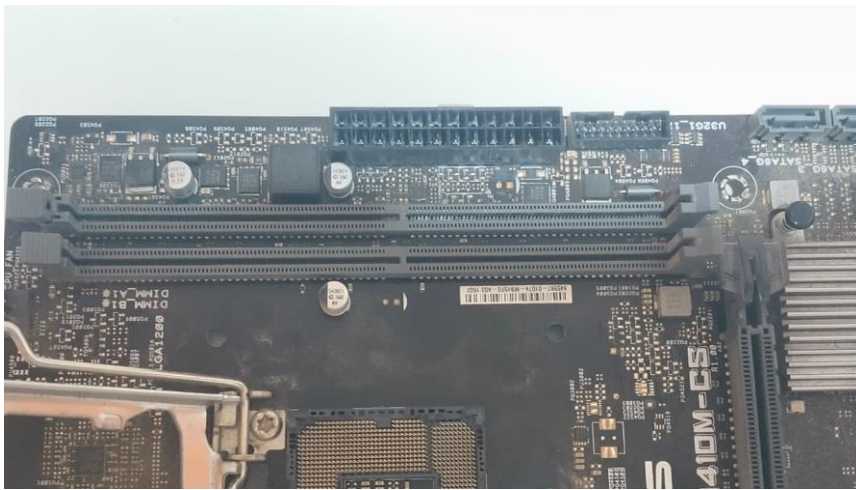

Step 7: Remove the Motherboard

Caption: I removed the screws and carefully lifted the motherboard out of the case.

Step 8: Finish

Caption: All the main parts were removed carefully. I kept the screws and parts in a safe place.

Task 3:- Reassemble the PC you disassembled, documenting each step with a brief explanation of what you connected or installed and why the order matters.

Reassemble The PC You Disassembled, Documenting Each Step With A Brief Explanation Of What You Connected Or Installed And Why The Order Matters.

Brief Explanation Given In

Order to Fix-

- 1) Mother Board On Cabinet It Is The Main Circuit Board On Which Other Components Are Connected So It Is First Fixed.
- 2) As Per My Opinion the Front Port Cables Should Be connected On the Motherboard-They Are Small and Quiet Tiny So after Fixing Other Components It's Hard To Fix That Tiny Pins.
- 3) Now We Should Go For GPU As PCIe Slot Comes After This Small Ports-It Can Fixed First So That Ram Can Easily Fix And Don't Get Compact.
- 4) Now We Should Fix CPU In Its Slot-If We First Fix Ram Then At The Time Of Fixing The CPU Fan Can Be Quit Hard To Fix Between Small Space From Ram And GPU.
- 5) CPU Fan.
- 6) Now We Should Fix SMPS That Its Power Can Be Easily Given To 24-Slots Ping And Then Ram Should Be Fixed.
- 7) Now We Should Fix Ram.
- 8) And We Should Connect SSD/HDD To Sata And SMPS.
- 9) And the Remaining Wires Should Be Connected For E.G. Gpu Fan

Task 4:- Create a checklist of safety precautions and tools needed before starting the PC assembly/disassembly process, and explain why each is important.

PC Assembly/Disassembly Checklist

Safety Precaution / Tool	Why It Is Important
✓ Turn off the PC	Keeps you safe from electric shock.
✓ Unplug the power cable	Stops electricity before working.
✓ Clean table	Gives enough space to work safely.
✓ Wash and dry your hands	Keeps the PC parts clean and safe.
✓ Keep screws in a small box	Helps you not lose the screws.
✓ Screwdriver	Used to open and close the PC case.
✓ Anti-static wrist strap (if available)	Protects PC parts from static electricity.
✓ Soft cloth	Cleans dust from the PC parts.
✓ Good light	Helps you see all the parts clearly.
✓ Read the PC manual (if available)	Helps you know where the parts go.
