

Assignment:-3

Task 1:- List 5 common BIOS or POST error messages you might see when starting a PC and write what hardware or configuration issue each one usually points to.

Error Message	Usually Points To
CMOS Checksum Error	CMOS battery or BIOS settings problem
Keyboard Error	Keyboard is not connected or is faulty
Memory Error	RAM is loose, damaged, or not detected
No Boot Device Found	HDD/SSD is not detected or boot settings are wrong
CPU Fan Error	CPU fan is not connected, not working, or spinning too slowly

Task 2:- Given this scenario: On boot, a PC beeps 3 times in a repeating pattern and does not display anything on the screen. Research and write what this POST beep code typically means for an AMI BIOS, and suggest two troubleshooting steps.

Two troubleshooting steps:

1. Remove and put the RAM back: Turn off the PC, remove the RAM, clean it gently, and insert it again properly.
2. Test the RAM: If there are two RAM sticks, try using one stick at a time to find the faulty one.

Task 3:- Access the BIOS setup utility on any available PC or virtual machine, take a screenshot of the main BIOS screen, and identify the motherboard manufacturer and BIOS version

Task 4:- You are given a screenshot of a POST error message that says 'CMOS checksum error – Defaults loaded.' Explain what this means and describe how you would resolve this issue in a real system Think about the CMOS battery and BIOS settings reset
