Day2 Network Topologies

Task 1:- Draw a diagram of a bus topology and label all key components, then write one real-world example where this topology might be used.

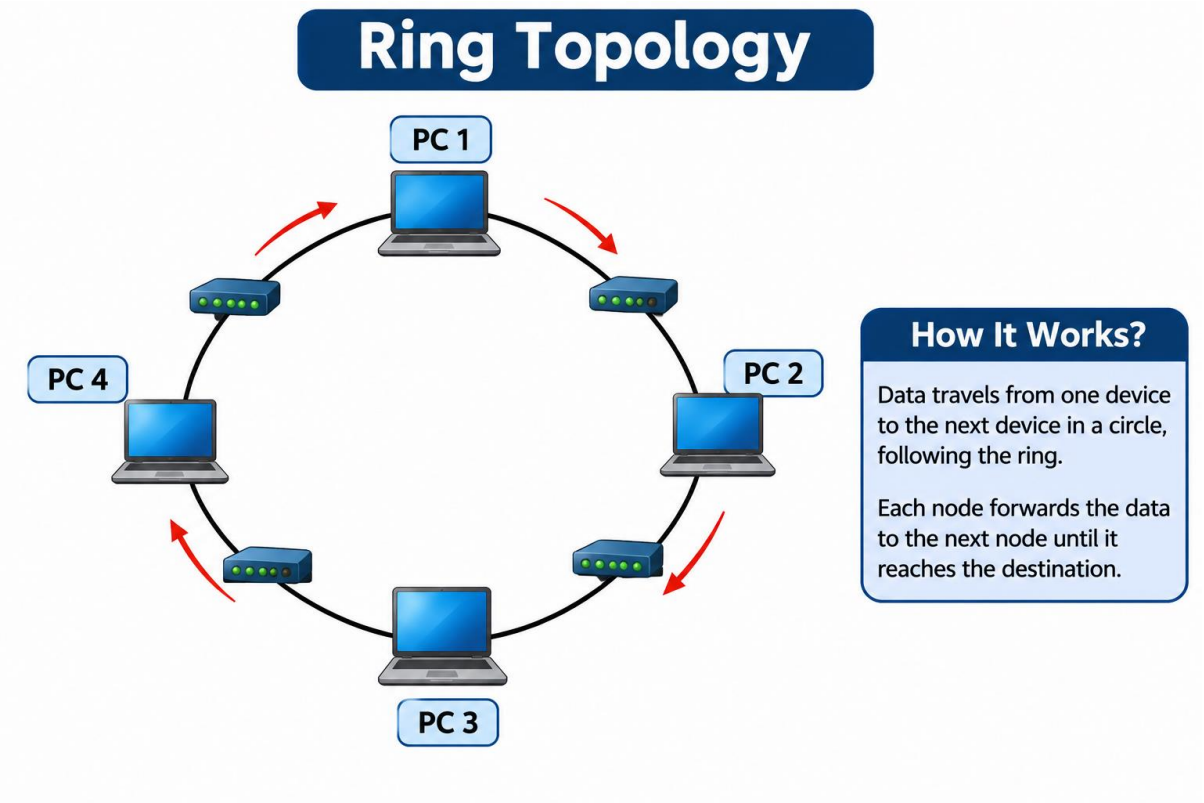

Priyansh Bhaliya

Task 2:- In Cisco Packet Tracer, create a simple star topology with one switch and four PCs connected to it; name each PC after a popular app (e.g., WhatsApp, Zomato, Spotify, Flipkart) and take a screenshot of your topology.

Priyansh Bhaliya

Task 3:- Draw a ring topology diagram and explain in 2-3 sentences how data travels between devices in this setup. Use arrows to show the direction of data flow.

Priyansh Bhaliya

Task 4:- Compare mesh and star topologies by listing 2 advantages and 2 disadvantages of each in a table format.

Topology	Advantages (2)	Disadvantages (2)
Mesh Topology	1. Highly reliable because multiple paths can connect devices. 2. Provides good fault tolerance if one link fails.	1. Expensive because it requires many cables and ports. 2. Complex to install and maintain.
Star Topology	1. Easy to install, manage, and troubleshoot. 2. Failure of one device's cable usually does not affect other devices.	1. If the central switch or hub fails, the network may stop working. 2. Requires more cabling than some simpler topologies, such as bus topology.
