Introduction to Network

Task 1:- Draw a simple diagram (hand-drawn or digital) showing how your phone connects to Instagram, including your device, WiFi router, ISP, and Instagram server. Label each part and the connections.

Priyansh Bhaliya

Task 2:- List 5 devices you use or see daily that are part of a network (for example: smartphone, smart TV, WiFi router, laptop, smartwatch). For each, write what type of network it connects to (LAN, WAN, PAN, etc.).

No.	Device	Network Type	Purpose
1	Smartphone	WAN / WLAN	Connects to the internet using Wi-Fi or mobile data.
2	Laptop	LAN / WLAN	Connects to other devices and the internet through a router.
3	Wi-Fi Router	LAN / WAN	Connects local devices and provides internet access.
4	Smart TV	LAN / WLAN	Connects to the internet to stream YouTube and Netflix.
5	Smartwatch	PAN	Connects to a smartphone using Bluetooth.

Network types:

- LAN: Local Area Network
- WAN: Wide Area Network
- WLAN: Wireless Local Area Network
- PAN: Personal Area Network

Task 3:- Explain the difference between the Internet and an intranet using an example from your college or a public WiFi you have used.

Internet	Intranet
A global network accessible to the public.	A private network used within an organization.
Anyone can access public websites with an internet connection.	Only authorized users can access it.
Example: Google, YouTube, Instagram.	Example: College student portal or internal attendance system.

Example from my college:

- Internet: When I connect my phone to college Wi-Fi and open YouTube or Google, I am using the Internet.
- Intranet: When I use a college's private student portal to check attendance, internal notices, or exam records, I am using an Intranet, if the portal is restricted to authorized college users.

Task 4:- Pick any one app you use (like WhatsApp, Zomato, or Flipkart) and describe, in 4-5 lines, how data travels from your device to their server and back when you perform a search inside the app. Mention the devices and networks involved, and what happens when you hit 'search'

Example: Instagram App

1. I open Instagram on my phone and type something in the search bar.
2. When I press Search, my phone sends the request through Wi-Fi or mobile data.
3. The request travels through the internet to Instagram's server.
4. Instagram's server finds the results and sends them back to my phone.
5. The results appear on my screen.
