

OS Assignment:-5

Task 1:- On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

Task 2:- Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation. Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Simple Steps

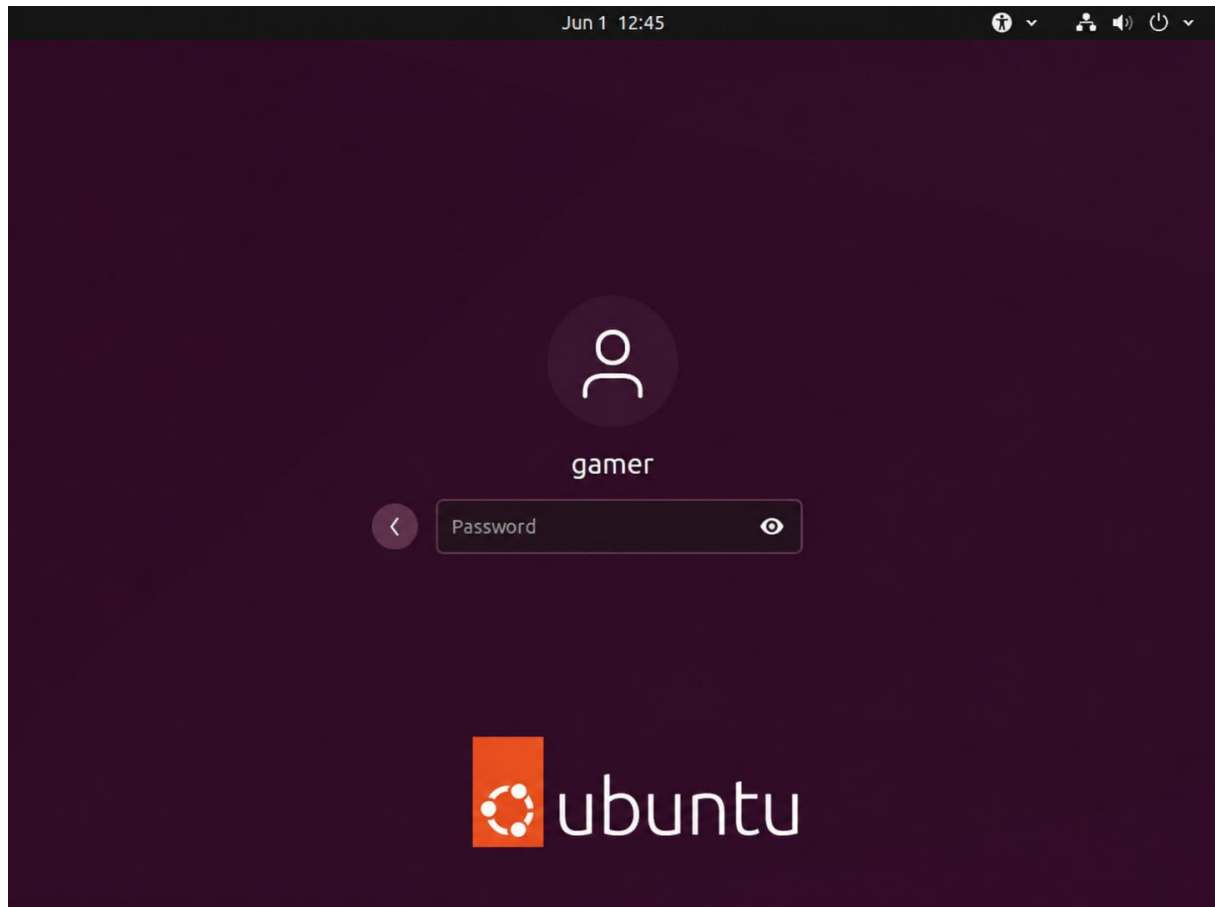

1. Download a Linux ISO like Ubuntu or Fedora.
2. Insert a USB drive into the computer.
3. Open Rufus or BalenaEtcher.
4. Select the Linux ISO file.
5. Select the USB drive.
6. Click Start/Flash and wait for it to finish.
7. Restart the computer and boot from the USB.
8. Follow the Linux installation instructions.

Task 3:- On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati. Hint Find 'Language & Region' in System Preferences to add or change languages.

Steps on macOS

1. Open System Preferences.
2. Click Desktop & Screen Saver.
3. Choose a new desktop wallpaper.
4. Go back to System Preferences.
5. Click Language & Region.
6. Click the + button to add a language.
7. Select Hindi or Gujarati.
8. Choose Use Hindi/Gujarati as the main language.
9. Restart or log out if macOS asks you to.

Task 4:- Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

Task 4:- Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

- Backup your files first.
- Create a Windows 10 bootable USB using Microsoft's Media Creation Tool.
- Restart the laptop and boot from the USB.
- Choose Install now → Custom installation.
- For partitioning, select the correct SSD. If doing a completely clean install, delete the old Windows partitions and install into the unallocated space. ⚠️ This erases data.
- Finish Windows setup and create your account.
- Install Wi-Fi, chipset, graphics, and other drivers if needed.
- Go to Settings → Update & Security → Windows Update and install available updates.
- Review Privacy settings and turn off unnecessary location, advertising ID, and app permissions.
- Keep Windows Security/Defender enabled and set up backups.
